Skills

DevOps

Docker, Kubernetes, Terraform, Ansible, AWS, GCP, Azure, Traefik, Nginx, GitHub CI/CD, n8n, Jenkins, Cloudflare, Wireguard, General CI/CD pipelining, Grafana, Prometheus, Loki

Programming

Python, C/C++, Java, Golang, Rust, shell scripting

Tech Stack

Django, Flask, FastAPI, Go-Gin, SQLAlchemy, GORM, PostgreSQL, MySQL, SQLite

Embedded system

Embedded C, Arduino, Raspberry PI, Jetson Xavier, IOT sensors integration, automation

Miscellaneous

R, MatLab, LTspice

Education

Vellore Institute of Technology, Chennai

B.Tech CSE

8.17 CGPA

Aug 2023 - Present

Experience

Hooman Digital

DevOps Engineer

🌐 hooman.digital

March 2026 - June 2026

Remote

- Managed and owned **Inferia-LLM**, a multi-node multimodal AI orchestration platform supporting LLM inference, audio pipelines, video processing & other AI workloads across heterogeneous inference engines.
- Redesigned the **orchestrator architecture** for scalability and reliability; engineered dynamic model spawning, autoscaling, load balancing & cross-provider node allocation across **AWS, GCP, Azure** and partner providers Akash, Nosana, reducing model cold-start time by **80%** and improving stability and uptime.
- Implemented **fine-grained observability & access control**, migrated performance-critical services Python to Go, and maintained Inferia-Auth (SSO) & Inferia-Gate (API gateway & model aggregation).

Nayara Energy Limited

Software Development Intern

🌐 nayaraenergy.com

May 2025 - June 2025

Jamnagar, Gujarat

- Designed and built an internal tool processing **500+ SIM requests monthly**, automating the end-to-end SIM lifecycle including issuance, activation/deactivation, replacements, porting, and eSIM issuance.
- Integrated **Active Directory-based SSO** for **3,000+ employees** and automated email workflows with Vodafone Idea and Airtel, reducing manual carrier communications by 95%.
- Developed a real-time inventory dashboard tracking **4,000+ SIM cards** with audit logs, reducing reconciliation time by 90%, improving processing efficiency by **80%**, and saving **~40 hours/month**.

Projects

Rodan

🌐 <https://github.com/intraware>

July 2025

Tech Stack: Go (Gin, GORM), Rust, PostgreSQL, Docker

- Developed a **containerized CTF platform** with per-team challenge isolation and **dynamic flag generation**, using concurrent **Go routines** for challenge orchestration and automated challenge lifecycle management.
- Designed a **microservice** architecture with SSE-based event delivery, and Rust based file server, decoupling static serving ephemeral containers and reducing memory footprint by **65%**.
- Tested at events with **500+ participants** and **1,400+ concurrent containers**, optimizing connection handling and orchestration to sustain **10K+ requests/minute** under high-concurrency workloads.

DyneFire (Dynamic Firewall)

🌐 <https://github.com/ankitprasad2005/dynefire>

March 2026

Tech Stack: Python, PyTorch, FastAPI, Linux, iptables

- Developed an **RL-based adaptive firewall** combining a pretrained 3-layer MLP traffic classifier with a **PPO agent**, classifying live traffic across **15 attack categories** and dynamically selecting mitigation actions.
- Built a real-time packet-processing pipeline handling **50K+ concurrent-flow capacity**, implementing **kernel-level** traffic enforcement via **iptables** for rate limiting and temporary/permanent blocking.
- Engineered a **FastAPI + SSE dashboard** for real-time firewall monitoring and blocklist management.

Volunteering

Linux Users Group (FOSS United)

Operating Systems Lead

🌐 <https://lugvitc.net>

Sep 2023 - May 2026

Chennai, Tamil Nadu

- Designed and deployed **35+ dynamic CTF challenges** focused on cryptography, network exploitation, and file forensics, containerizing and rigorously testing each challenge to ensure robustness and security.
- Conducted **5+ workshops** on containerization, self-hosting, and multi-node infrastructure, showcasing my **home lab architecture**, running 35+ services securely as a practical example.
- Led an on-ground technical support team, troubleshooting complex OS-related issues during events with **550+ participants**. Organized Linux installation booths with **15+ curated spin-offs** tailored to specific use cases.
